RE: Section 6(a)(2) October Incident Filing

Dear 6(a)(2) Administrator:

On behalf of Reckitt Benckiser, Scientific & Regulatory Consultants, Inc. (SRC) is submitting the enclosed documents containing alleged adverse effect incidents for products listed below. SafetyCall is a primary gathering source for incidents, though internal reports for calls/correspondence received directly at Reckitt Benckiser are also included. SRC is acting on Reckitt Benckiser's behalf by assisting them in registration actions and their reporting requirements in accordance with FIFRA section 6(a)(2).

The EPA Registration Numbers with adverse effect incidents for this filing are:

- 777-83
- 777-114
- 777-118
- 777-81
- 777-66
- 777-70
- 3282-66
- 777-89

These incidents are being reported in compliance with 40 CFR § 159.184 and have been assigned the H-B or H-C severity classification. If additional information is needed, please feel free to contact us by e-mail (bmacdonald@srcconsultants.com or akline@srcconsultants.com) or by phone at 260-244-6270.

Sincerely,

A handwritten signature in black ink, appearing to read 'Bob MacDonald'.

Brief description of incident circumstances.

Ferguson, Anna Oct 11 2013 11:02AM
CRC transfer

Hx: Caller cannot find EPA# or UPC, but states that the product is dCon with AI brodifacoum. On 10/9/13, he began having abdominal pain, and defecated blood. Pain has persisted, and was particularly bad yesterday, but has improved today. They are a significant distance from ER.

Caller suspects that his son contaminated the stew he ate on 10/8/13 with product, because son has tried similar things in the past to harm him (eg - putting bleach in caller's coffee).

A: These are possible sx of product toxicity. Recommend calling 911 for transport to ER. Have staff call with questions.

Nordaune, Abby Oct 11 2013 6:37PM

Cb from Dr. Bialeck. Phone # 2027452751. She states INR is 1--normal. Would like to know if there are any further recommendations.

A: Product is an LAAC, takes at least 24hrs to start working and 2-5days before sxs present. Transferred to specialist for further rec./information.

Roman, Youssef Oct 11 2013 6:53PM

I recommended the physician to repeat the INR or PTT test after couple days to capture any delayed effect of the product. CB if you have more more questions.

White, Vicki Oct 13 2013 8:39AM

CB from Robert Sr. He states he knows for a fact that his son put pellets in his stew on 10-8-13. Box was empty and pellets were on the floor. Caller did not notice a bad taste or odd color. 1 day later he experienced 'excessive' rectal bleeding. He was seen at ED but feels that because of his bipolar disease that he was 'made fun of' and not taken seriously. A CAT scan was taken, and blood tests were done. He was told to come back for follow up but does not want to do this. 1 day ago the caller felt very unwell. He ate 4 pieces of raw garlic 1/2' in size, and this made him worse. His lower abdomen was painful and tender to the touch. Today he is constipated and has a headache. He is calling to ask what sxs this product will cause, and if it will cause cancer or prostate problems. He is taking 'a bunch' of laxatives to 'get the poison out'. He is also taking vitamin K as an antidote.

A Explained that the product is a LAAC and will cause bleeding related sxs. Constipation and headaches are not expected. Vitamin K will not help, Vitamin K1 is the antidote for this but it's usually prescription.

You really do need medical follow up today. A PT should show if you have been effected by this product. If you are sure your son did this to you, you should involve the police.

Nordaune, Abby Oct 13 2013 3:33PM

Cb from caller. He states he is extremely constipated and would like to know what the best thing is for him to do. He also states that he felt very lightheaded a little while prior to this call today. He has been taking ducoset and milk of magnesia for constipation. He would like to know what effect consuming raw garlic has on the product, how long the product stays in his system, if product causes colitis, if it causes constipation, if it causes cancer, and what is causing his cancer. He has purchased an enema for constipation, but has yet to use it.

A: This will all be documented and reported, but you need to call the ER to find out when they want you to be seen for f/u PT test as they directed and if they want you to be seen today. Do not use anything else such as an enema to treat at this time. Product causes bleeding, we do not know what the cause of your constipation is, but rec. discussing that with the MD when you go for f/u. Product can stay in the body for months. Garlic is not an antidote, only Vit K1 is by prescription, and we are unable to say what effect, if any, it would have on product ingestion. Toxicity would have to be diagnosed by an MD. Cb prn.

Nordstrom, Dan Oct 14 2013 12:26AM

Hx: Caller states she is an M.D. and conducted a PT test with all results normal. Caller states she inspected stool sample and it was clear. Caller states the pt is now asx.

Voluntary Industry Reporting Form for 6(a)(2) Adverse Effects Incident Information

Provide all known, required information. If required data field information is unknown, designate as such in appropriate area Page 3 of 4

A: Thank you for contacting us to report your findings. We will document this for the manufacturer and forward the case report onto them. Callback 24/7 if you have any other questions or concerns, or if you need further toxicological consult.
